The only flash of fireworks came in the consideration of one of the least important sections of the report, but it brought to light a complete disagreement between the committee on unemployment statistics of the conference and Secretary of Labor Davis over the extent of unemployment in the United States.

Clash Over Size of Idle Army.

The report submitted by Mr. Robinson stated that the committee on unemployment statistics had found that there were approximately 4,000,000 men and women out of jobs in the country. This Mr. Davis challenged, insisting that the figures submitted to the Senate six weeks ago by the Department of Labor, stating that 5,735,000 persons were out of jobs, should be accepted as more accurate.

Mr. Davis said the Department of Labor figures showed that since the Senate received the report the extent of unemployment had been cut down by about 200,000, and that therefore it should be held that 5,535,000 were out of work.

"I have brought the Department of Labor statistician to this meeting to explain these figures," Mr. Davis said with some vigor when Mr. Robinson declared that the evidence obtained by the committee showed 4,000,000 unemployed to be more accurate.

Secretary Hoover, serving as chairman of the conference, stepped into the controversy with a suggestion that the report be adopted without a statement as to the number of unemployed.

"Let us say that several millions are unemployed," Mr. Hoover suggested.

"No," flashed Secretary Davis. "That means 3,000,000."

"Then," returned Secretary Hoover, "let's make it 'many' millions."

Hoover Disentangles Snarl.

There followed a general debate in which half a dozen members of the conference, including Samuel Gompers, participated. It wound up finally in a parliamentary tangle which Chairman Hoover solved with some difficulty.

It was Mr. Gompers's view that the report should say merely "many millions of unemployed" in the country.

In the end — hour or so the conflict reached a stage at which everybody agreed to the definite statement that between 3,500,000 and 5,500,000 are unemployed in the United States.
